1 What is Expert Finder?

Idea of this application in order to be a solution to the problem of anyone who wants to receive services requires a hand of experts.

Main purpose of our project is to enable people to access the services they need (plumber, locksmith, cleaner, etc.) more easily from a single application. In addition, people who will provide these services will register on our platform and create a profile. People will determine the quality of the service provided by scoring after the service they receive, and the person providing the service will be rewarded by standing out in this way.

2 Major Features

Major features of Expert Finder include:

- Login Pages
- Register Page
- Main Menu
- Detailed Search Button
- Share Post Page
- Portfolio Pages
- Profile Pages
- Chat Boxes or Pages

3 How does it work?

With Expert Finder, experts can easily create their own profiles and get the crafting job they want to get and earn money quickly. In our application, those who want to get service will advertise and experts will be able to choose it, and the masters will be able to create their own profiles and get job offers. With the scoring system, we try to unite the consumers with the craftsmen who do better quality work.

If a consumer wants to get a service, he/she will not create an advertisement like competing applications and wait for someone to see and receive that advertisement for days.

The application will reward the success by taking the masters with more points interaction further.

We determined the general course of our practice and conducted research according to the problems we experience in this area in our daily life and a problem and need that everyone we hear about is common. The main purpose of our project is to enable people to access the services they need (plumber, locksmith, cleaner, etc.) more easily from a single application. In addition, people who will provide these services will register on our platform and create a profile. People will determine the quality of the service provided by scoring after the service they receive, and the person providing the service will be rewarded by standing out in this way.

Expert Finder app will work easily and I will came with clear interface. It will be able to do all these features quickly and easily thanks to a single app and a detailed search button.

It will have a user-friendly structure because comments, done works, scores will all be visible on profiles and homepages.

4 Using Expert Finder

4.1 Log In Pages

4.1.1 Login Page (User)

When the application starts the "Login Page" appears first. It requires the user to enter a user name and password to log in to their profile. Once the user has successfully logged in, the main menu will be displayed. The user has three choices:

1. Searching for expert
2. Post sharing area
3. Message box

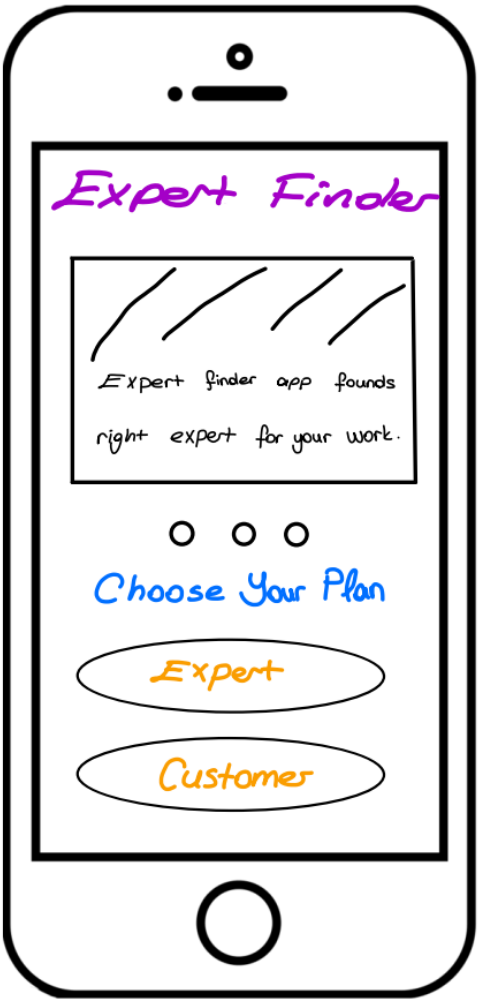
The user can also view and edit his profile with the button on the top of the main menu.

4.1.2 Login Page (Expert)

When the application starts the "Log in Page" appears first. It requires the expert to enter a user name and password to log in to their profile. Once the expert has successfully logged in, the main menu will be displayed. The expert has three choices:

1. Searching for job
2. Post sharing area
3. Message box

4.2 Registration Pages



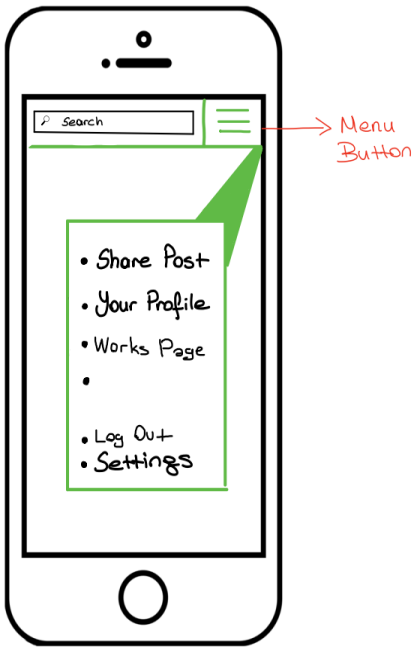
4.2.1 Registration Page (User)

If the user has no account on the application they can register from the "Register Page". It requires the user create and enter a new user name and password to register the system.
Once the expert has successfully registered, the log in page will be displayed again and it needs to enter the security user name and password to log in to their profile.

4.2.2 Registration Page (User)

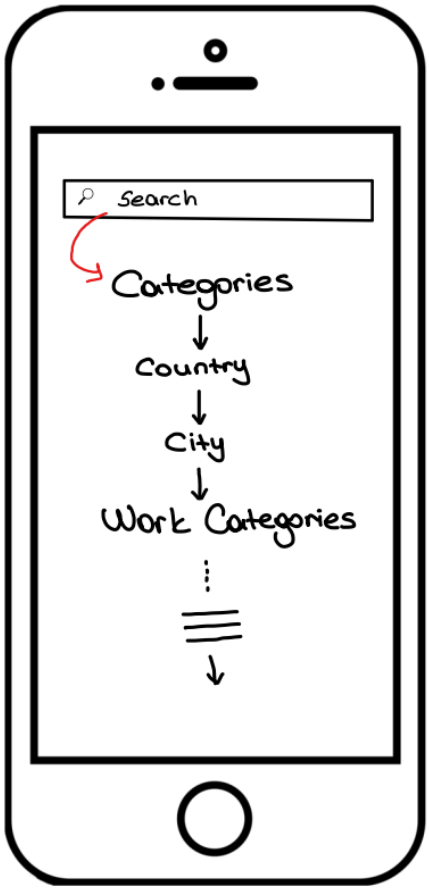
If the expert has no account on the application they can register from the "Register Page". It requires the expert create and enter a new user name and password to register the system.
Once the expert has successfully registered, the log in page will be displayed again and it needs to enter the security user name and password to log in to their profile.

4.3 Main Menu



Main menu where users can find experts or register an expert.Also, it includes profile that includes user informations , dropdown menu that includes home,settings,logout etc., information button that explain what that this app briefly.

4.4 Search Button



4.4.1 Search Button (User)

Instead of sharing a post, the user can find and interview the masters who opened the post for the job they will do.
There will also be a button to find workers with only +4 stars in the boxes, so that you can work with people who have
done their job well before. The keyword the user enters will show him/her the shared posts and experts related to the job.

4.4.2 Search Button (Expert)

The Master can use this button to find jobs that match his search, suitable for his skills, and apply for them. For example,
when he writes about kitchen installation, he can only find people who need help with kitchen installation and apply according
to the suitability of the job.

4.5 Share Post Page

4.5.1 Share Post Page (user)

While creating a post, the user can show/describe the work to be done, write the average day of completion,
tell the average price he will give, add a photo and write the keywords so that the post can be seen more.

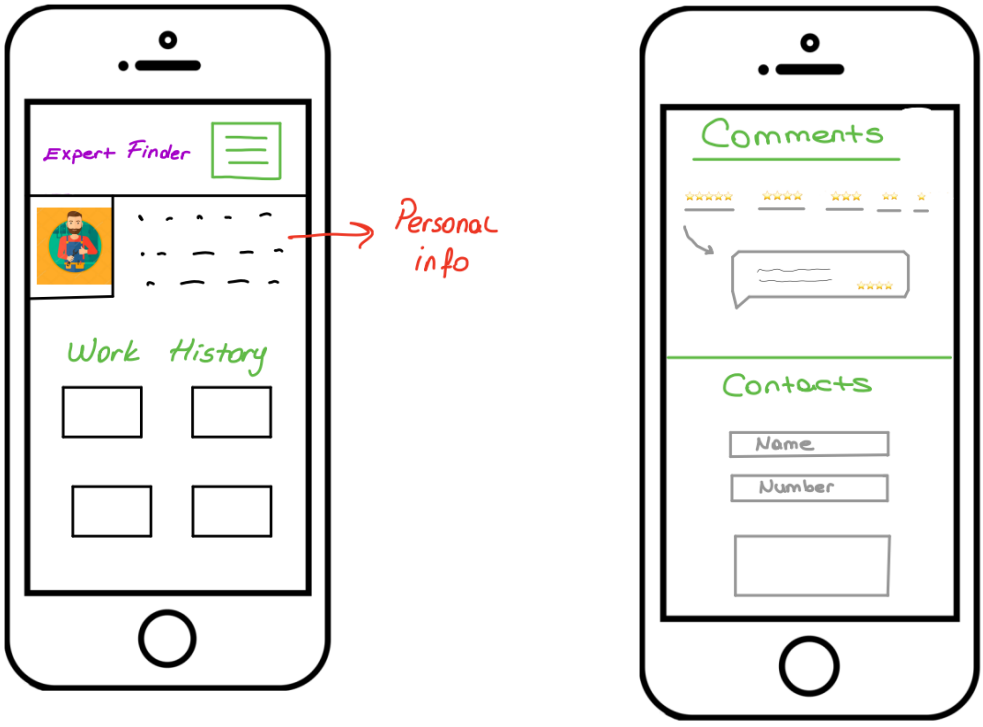
4.5.2 Share Post Page (expert)

Experts can post a job posting by writing the subjects that they are capable and able to work, the hours they can work and the working days,
and the average price per day and work. By looking at these posts, users can choose the master who will do the job in the shortest time and most

4.6 Portfolio Page

4.6.1 Portfolio (user)

Users can show that they are a real buyer and have a work history by adding the jobs they have done before in our system
to their work portfolio.



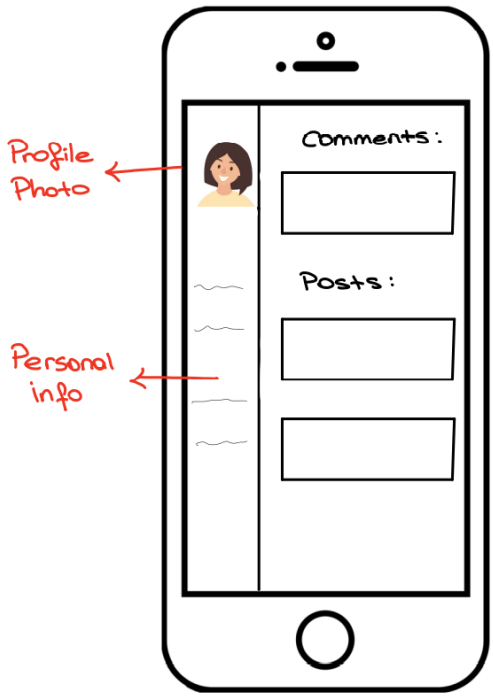
4.6.2 Portfolio Page (Expert)

Experts can present this work to the customers by posting it in order to show the beauty of the craftsmanship they have done in

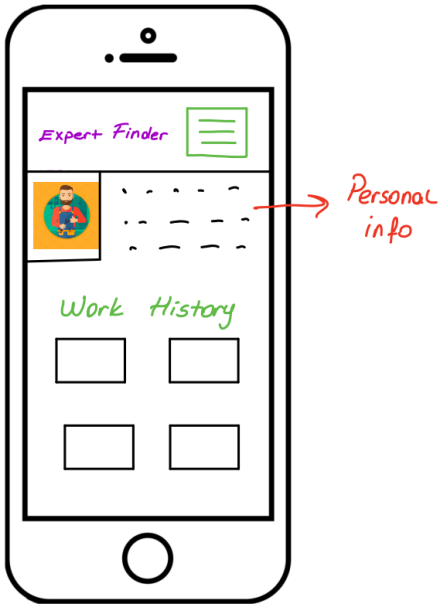
their own work area and attract the attention of the customers. These posts will increase the number of job offers the expert receives.
This portfolio they share will appear on the profile of the masters and will make them more professional.

4.7 Profile Pages

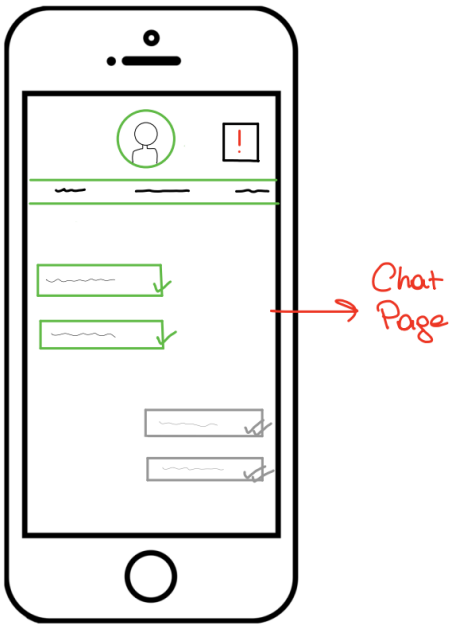
The screen where the profiles of the experts and users



For User it includes personal info,comments for works or experts,post that shared by user etc.



For experts it includes liked,disliked.In this way,customers can understand how much expert good at this job Also, it includes email and phone,twitter,facebook etc.

4.8 Chat Page


The screen where the customers and experts chat each other.It can be usable anytime.Before work and after work.
